Python

About the Consultant

Hello !

I am Shubham Mishra

An expert from IT Industry will be the main consultant on this Workshop/In-house Training, he has 5+ years of hands-on experience in software development, automation, managing cloud infrastructure, implementing new tools/technologies and server management (Linux and Windows).

I worked for **Airbus, Ozdingo, Cedcross** etc and worked with leading organizations like **Paypal, NAB** (National Australian Bank), **Shopify, NHAI** and **NPCI** (HDFB, SBI, IDFC, Axis Bank). I am graduated (B-Tech) from MCGV University and is pursuing post Graduation (**M-Tech cloud computing**) from IIT Patna.

I am here because i love
to share knowledge.

Hello!

I am Shubham Mishra
Software Engineer

I am here to teach you Python.

Introduction

- **Python** is a general purpose, **dynamic**, **high level**, and **interpreted** programming language.
- It supports **Object Oriented programming** approach to develop applications.
- It is **simple and easy** to learn and provides lots of **high-level data structures**.
- Python is not intended to work in a particular area, It is a **multipurpose programming language**.
- We **don't need to use data types to declare variable** because it is **dynamically typed** so we can write `a=10` to assign an integer value in an integer variable.
- Python makes the **development and debugging fast** because there is no compilation step included in Python development, and edit-test-debug cycle is very fast.

Python features

- Easy to Learn and Use
- Expressive Language
- Interpreted Language
- Cross-platform Language
- Free and Open Source
- Object-Oriented Language
- Large Standard Library
- GUI Programming Support
- It can be easily integrated with languages like C, C++, JAVA etc.

History and versions

- The implementation of Python was started in the **December 1989**
- by **Guido Van Rossum** at CWI in Netherland.
- Python programming language is being updated regularly with new features and supports. There are lots of updations in python versions, started from 1994 to current release.
- On December **3, 2008, Python 3.0** was released.
- Python programming language is being updated regularly with new features and supports. There are lots of updations in python versions, started from 1994 to current release.
- **Current Version of Python 3.11.2 April 2023**

Python Applications

- Web Applications
- Desktop GUI Applications
- Scientific and Numeric
- Business Applications
- Console Based Application
- Audio or Video based Applications
- 3D CAD Applications
- Enterprise Applications
- Applications for Images

Why Python?

- Python **works on different platforms** (Windows, Mac, Linux, Raspberry Pi, etc).
- Python has a **simple syntax similar to the English language**.
- Python has syntax that allows developers to write programs with fewer lines than some other programming languages.
- Python runs on an **interpreter system**, meaning that code can be executed as soon as it is written.
- Python can be treated in a procedural way, an object-oriented way or a functional way.

Python Syntax compared to other

- Python was designed for **readability**, and has some similarities to the English language with influence from mathematics.
- Python **uses new lines to complete a command**, as opposed to other programming languages which often use semicolons or parentheses.
- Python relies on **indentation**, using whitespace, to define scope, such as the scope of loops, functions and classes. Other programming languages often use curly-brackets for this purpose.

Python in the list of top programming, scripting and markup languages (Based on uses)

First program of python

A stylized illustration of a computer monitor with a white frame and a grey base. The screen is blue and displays the Python code `print("Hello, World!")` in white text. The background of the entire slide is a dark blue gradient with a white geometric network pattern of lines and dots.

```
print("Hello, World!")
```

Thanks!
